Who am I?

26
German
In my year 3
Studying in the Netherlands

Medium
Mania

```
#endif
            assert(m_upstream != nullptr);
            return m_upstream->allocate(n, aligment);

        }
        template <typename Arg, typename... Args>
        void doPrint(std::ostream& out, Arg&& arg, Args&&... args)
        {
            out << std::forward<Arg>(arg);
            using expander = int[];
            (void)expander {
                0, (void(out << ',' << std::forward<Args>(args)), 0)...
            };
        }
        template<typename T,class... Args >
        T* allocate_object(const size_t aligment , Args&&...args)
        {
            auto ptr = allocate(sizeof(T), aligment);
            if (ptr == nullptr) return nullptr;
            return ::new (const_cast<void *>(static_cast<const volatile void *>(ptr)))
                T{ ::std::forward<Args>(args)... };
        }

        void deallocate(void* ptr, size_t n,size_t aligment = alignof(max_align_t))
        {
            if (ptr == nullptr) return;
            std::unique_lock<std::mutex> allocLock(mutex);
            if (!DoDeallocate(ptr, n, aligment)){
                m_upstream->deallocate(ptr, n, aligment);
            }
#ifdef _DEBUG
            else
            {
                ++m_numberOfdealloc;
            }
#endif
        }

        void deallocate(void* ptr)
        {
            if (ptr == nullptr) return;
            if (!DoDeallocate(ptr, alignof(max_align_t))) {
```

I am an imposter
